

## Standardised Radiology Centre Roll-Out Process

### Client

#### **Technoscan, Egypt**

The largest Diagnostic Imaging centres platform in Egypt and part of TechnoGroup Investments Holding, offering comprehensive diagnostic radiology imaging services across Egypt

### Project

To develop a standardized process for building and rolling out multiple centres across Egypt over 4 years

### Scope

**Develop** the standards for design, procurement, construction and commissioning of all new centres.

**Standardise** a unique style guide for all Technoscan new centres

**Create** an easy to follow manual spelling out the standardised process for opening a new center from plan to operation.

### excellenceO2 Contribution

excellenceO2 developed a standards-based model for rolling out all the new Technoscan centres planned across Egypt. The key components of the model are design uniformity and cost-effective high quality construction standards. Prepared and implemented a “Centres-Roll-Out” manual with master specifications based on industry best practices, fit-for-purpose project timelines, and early risk mitigation.

### Benefits

Highly efficient centres roll-out capability allowing Technoscan to roll-out a large number of centres simultaneously across Egypt on budget and on schedule. Reduced cost of investment in new centres.

### Outcome

Comprehensive and detailed guide to opening all new Technoscan centres including: planning, design tendering and procurement, construction and supervision and hand-over and commissioning.

High quality standardised look-and-feel for all Technoscan centres.

Achieved substantial savings due to leveraging economies of scale in procurement of material supplies and equipment.

A comprehensive documented process essential for ease of centres certification
